WHY DO WE PROVIDE WATER?

Water is more than just a basic necessity — it's essential for cooking, cattle, and irrigation. Under the previous government, water supplies were blocked, wells were filled with concrete, and generators to power the wells were destroyed.

That's why our wells are dug much deeper than standard ones, reaching a purer, more secure source that cannot be cut off.

WATER
DISTRIBUTIONS

*“Which charity is best?” The Prophet
(SAW) said, “A drink of water.”
(Sunan al-Nasā’ī 3664)*

Revive operates **11 water distribution
points** throughout Syria.

Benefitting **more than 30000
people per day**

Your support helps keep Syria's
most vulnerable communities
alive — **one drop at a time.**

SYRIA: THE NEED FOR CLEAN WATER

46%

Of the population lack access
to an adequate water source
safe from contamination

Of Syrians face severe water
scarcity, surviving on just a fraction
of the global minimum standard.

21%

11.14 Million

In acute need of water assistance - emphasising the scale of the
crisis where access to clean, safe water is not guaranteed.

Why Should You Choose This Project?

This is a **Self-Funding** Future.

We don't just provide water; we provide a system that pays for itself. By using the Waqf Model, Bi'r Ghiyath Matar generates its own maintenance funds, ensuring your charity never stops flowing.

10,000

Monthly Uptime

How we extract life saving, pure, ground-water for the people of Syria:

1. Deep Extraction

We drill **100m deep** to bypass contaminated surface layers, tapping into protected aquifers for the purest raw water source.

2. RO Purification

Water passes through a high-spec RO Plant, providing **medical-grade** filtration that removes heavy metals and bacteria.

3. Strategic Distribution

Purified water is shared via a Sustenance Model: 20% is repurposed for cleaning and irrigation, 40% is gifted to the needy, while the other 40% is sold to ensure the plant is **self-funding**.

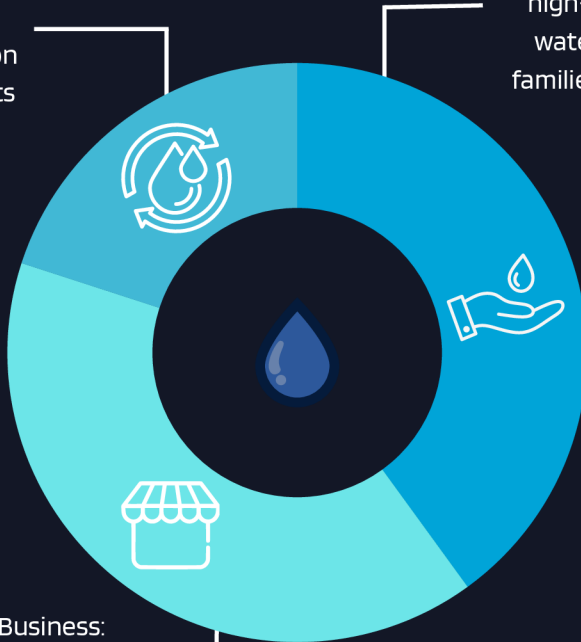

The Journey to Purity

How the "Sustenance Model" Works.

We split the water into three categories to ensure the project remains 100% self-sufficient and permanent.

20% – Technical Reuse:
"Reject water" is repurposed for cleaning and irrigation of salt-tolerant plants like Date Palms.

40% – Gifted to the Needy: Provides free, high-quality drinking water for vulnerable families and local clinics.

40% – Sold to Local Business:
Revenue from premium purified water sales to shops and farms pays for expensive replacement filters.

Why is This Project is Different?

The Sinking Fund

15% of all sales are locked away. When a solar part or pump breaks in 5 years, the money is already there to fix it.

Community Trust (Shura)

A local committee—made of a technician and a community leader—oversees the well to ensure fair distribution.

Time Savings

Local families save an average of 5 hours every day because they no longer have to travel miles to find clean water.

FINANCIAL EFFICIENCY

THE HUMAN COST

£1.93

COST PER BENEFICIARY

For less than the price of a cup of coffee, one person receives clean water for the rest of their life!

A one-time investment for a lifetime of clean water.

THE REVENUE ENGINE

1.2x

REVENUE RATIO

This station doesn't just survive; it thrives. It pays for its own repairs and grows its own future!

Generates 20% more than monthly running costs. Ensuring zero donor dependency.
